SUMMARY

Computer Programming and Analysis student at Fanshawe College with hands-on experience building web projects and relational SQL databases. Brings practical skills in HTML, CSS, JavaScript, SQL, and Google Sheets data integration, applying problem-solving to organize and present team and player information. Seeking a Web Developer co-op to contribute these project-based skills while continuing to grow in web development.

EXPERIENCE

Sales and Retail Associate / Stocker Worker June 2023 - March 2025

Just Rite Superstore, Lagos, Nigeria

- Recommended products based on customers' needs, helping them make informed purchasing choices.
- Monitored inventory and reported low- and out-of-stock items to management to support timely restocking decisions.
- Inspected returned merchandise and processed refunds or store credits in line with company procedures.
- Kept work areas organized and handled tasks accurately in a fast-paced retail environment.

EDUCATION

Advanced Diploma, Computer Programming and Analysis September 2025 - Present

Fanshawe College

- Applied programming and database concepts in projects, structuring football player records and querying them to retrieve, filter, sort, and analyze information.
- Built web development skills through projects that used JavaScript and Google Sheets to display London Dinamo U18 team information and statistics, while developing systems analysis and problem-solving skills through coursework and projects.

High School Diploma September 2018 - 2024

Landmark College

SKILLS

Languages: Java, C++, JavaScript, SQL

Web development: Frontend development, HTML, CSS, responsive web design

Databases & data: Backend development, relational database concepts, data organization, database and API integration, Google Sheets

Tools: Git, GitHub, Visual Studio Code, code management platforms

- Problem-solving

PROJECTS

London Dinamo U18 Soccer Website

HTML, CSS, JavaScript, Google Sheets, GitHub

• Built a web development project presenting London Dinamo U18 team information, match results, player records, goals, assists, and other statistics in one interface.

• Integrated Google Sheets as a data source and used JavaScript to retrieve and display team and match information, allowing data updates without manually editing every page.

• Designed a user-friendly frontend for organizing team details, results, and statistics, and used GitHub as a code management platform for the project.

Football Player Database

SQL
• Built a relational SQL database to organize football player records, including names, goals, salaries, nationality, market value, and other statistics.
• Wrote SQL queries to retrieve, filter, sort, and analyze player information, making related records easier to examine.

Student Grade Tracker

C++
• Built a C++ program to track courses, grades, passing requirements, and target marks, providing users with relevant grade information.
• Implemented calculations, conditional logic, and user input to produce results based on course and grade details.

Java GUI Application

Java
• Built a Java graphical user interface with event-driven programming, adding interface components for user interaction.
• Debugged and iteratively tested application functionality to identify and address issues.
